Organisation

De Mercuur Metal Spinning & Pressing is specialist in spinning and pressing metal. With this process, sheet iron is deformed cold and without cutting into 3D shapes. Founded in 1952, we have grown into a fully automated and robotized company.

De Mercuur has a flexible, cost-effective organization and manufactures in several shifts. As the first spinning company, we have fully robotized the spinning process through multi-tasking robots.

De Mercuur is among the top of its industry in the field of volume, (process) innovation and production automation

We offer a combination of distinctive preconditions on the basis of which we are able to offer a qualitatively constant range of products at very competitive prices. De Mercuur supplies over 400 different products and more than 1.2 million units to its customers in the European market.
Market focus and Positioning

The spinning and pressing technique is not bound to a certain product or industry. Thus, we serve a large number of different markets and industries.

Our focus lies on the production of (industrial) semi-manufactures, where there are larger series and where dimension, tolerances, delivery reliability and competitive pricing play an important role.

An example of industries that we supply to:

- Flue tubes
- Ventilating fans
- Filter and damper systems
- Air conditioning
- Lighting
- Waste treatment
- Packaging
- Cooking and kitchen equipment
- Medical equipment
- Street fixtures

De Mercuur positions itself as a supplier in these markets and supplies comprehensive solutions and products mainly on the basis of third-party drawings.
Products & Services

Comprehensive solutions

De Mercur outsources certain treatments, such as welding, powder coating, anodising etc, inside a network of partners and co-manufacturers that utilise the same market approach and philosophy. Because of this, we can always offer you a comprehensive solution and all additional treatments are performed by businesses that also have their own speciality in this.

We manufacture our own spinning and pressing tools. This enables us to supply you with prototypes swiftly and to realise any adjustments as early as the design stage, as a result of which your time-to-market for the introduction of new products is reduced.

Quality guarantee

All product specifications are recorded in a software package developed especially by De Mercur, such as material type, tool numbers, lot sizes, machine details, price agreements, minimum stocks, warehouse location code, etc. All drawings are digitised, so everyone always has the latest drawings to work with. Any adjustments are recorded immediately and updated for the next production run.
Supply Chain Management

Making customer-specific agreements, ranging from agreements with regard to production batches, order sizes and minimum stocks that must always be present at De Mercuur, to placing the most critical items on consignment with our customers, are important and distinctive added values of De Mercuur.

The possibility for our customer to be able to consult all of this through the Customer Log-In on our website fulfils an important supporting function in this.

If you feel that our manner of thinking may be of added value to your business, please get in touch with us. We would like to discuss how De Mercuur can interpret your critical factors with regard to your suppliers.
